PRACTICAL 2

Aim : Extend the portfolio application from Practical 1 by adding React Router. Implement a navigation bar with at least 3 routes: Home, Projects, and Contact. Each route must render a distinct component without a full page reload. Add at least 2 useState variables used meaningfully one for toggling UI visibility and one for managing a form input on the Contact page. The Contact page must include a controlled input that captures and displays user input in real time.

Code :

tend > src > pages > Contact.jsx > ...

```jsx
import { useState } from 'react';

export default function Contact() {
  const [message, setMessage] = useState('');
  const [showHelp, setShowHelp] = useState(false);

  return (
    <section>
      <h2>Contact</h2>
      <div>
        <label>
          Message:
          <input
            type="text"
            value={message}
            onChange={(e) => setMessage(e.target.value)}
            placeholder="Type a message"
          />
        </label>
        <p>Live preview: {message}</p>
      </div>
      <div>
        <button onClick={() => setShowHelp((s) => !s)}>
          {showHelp ? 'Hide' : 'Show'} Help
        </button>
        {showHelp && (
          <div style={{ marginTop: 8 }}>
            <em>Enter a short message and press submit (not implemented).</em>
          </div>
        )}
      </div>
    </section>
  );
}
```

frontend > src > pages > Home.jsx > ...

```jsx
import About from '../components/About';
import Skills from '../components/Skills';

export default function Home({ skillList = [] }) {
  return (
    <section>
      <About />
      <Skills skillList={skillList} />
    </section>
  );
}

```

```jsx
import { Link, useLocation } from 'react-router-dom';
import './NavBar.css';

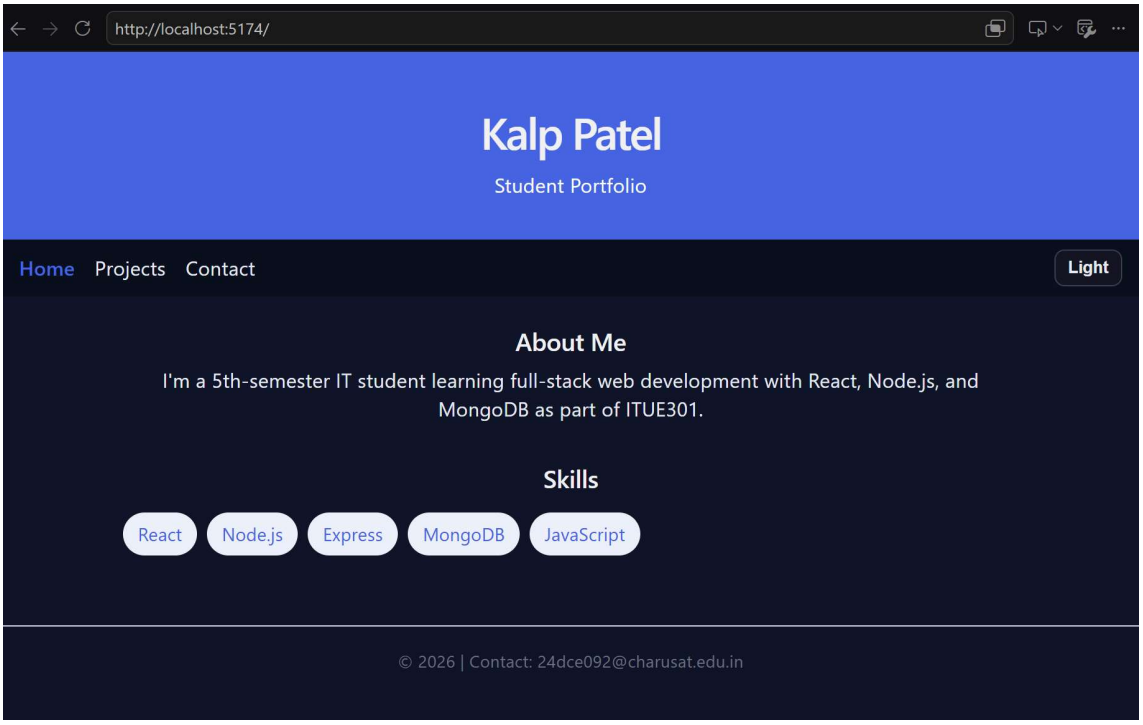

export default function NavBar({ onToggleTheme, theme }) {
  const location = useLocation();

  return (
    <nav className="nav">
      <ul>
        <li className={location.pathname === '/' ? 'active' : ''}>
          <Link to="/">Home</Link>
        </li>
        <li className={location.pathname === '/projects' ? 'active' : ''}>
          <Link to="/projects">Projects</Link>
        </li>
        <li className={location.pathname === '/contact' ? 'active' : ''}>
          <Link to="/contact">Contact</Link>
        </li>
      </ul>
      <div className="nav-actions">
        (property) React.JSX.IntrinsicElements.div:
        React.DetailedHTMLProps<React.HTMLAttributes<HTMLDivElement>, HTMLDivElement>
      </div>
    </nav>
  );
}
```

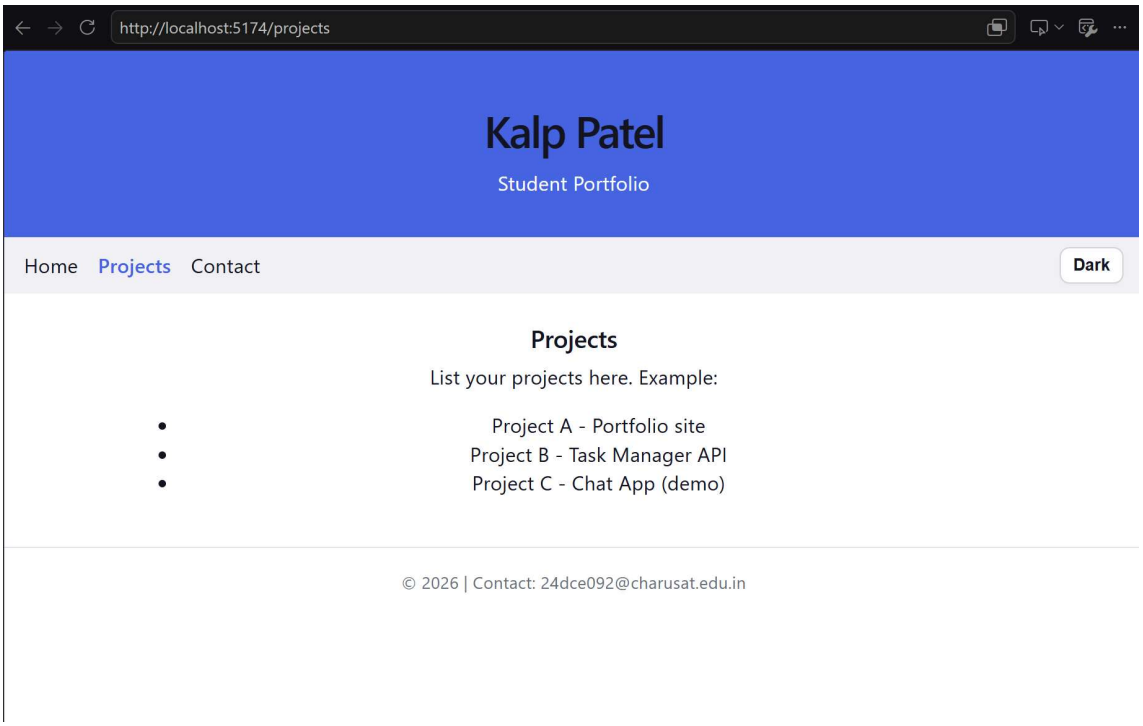

tend > src > pages > NotFound.jsx > NotFound

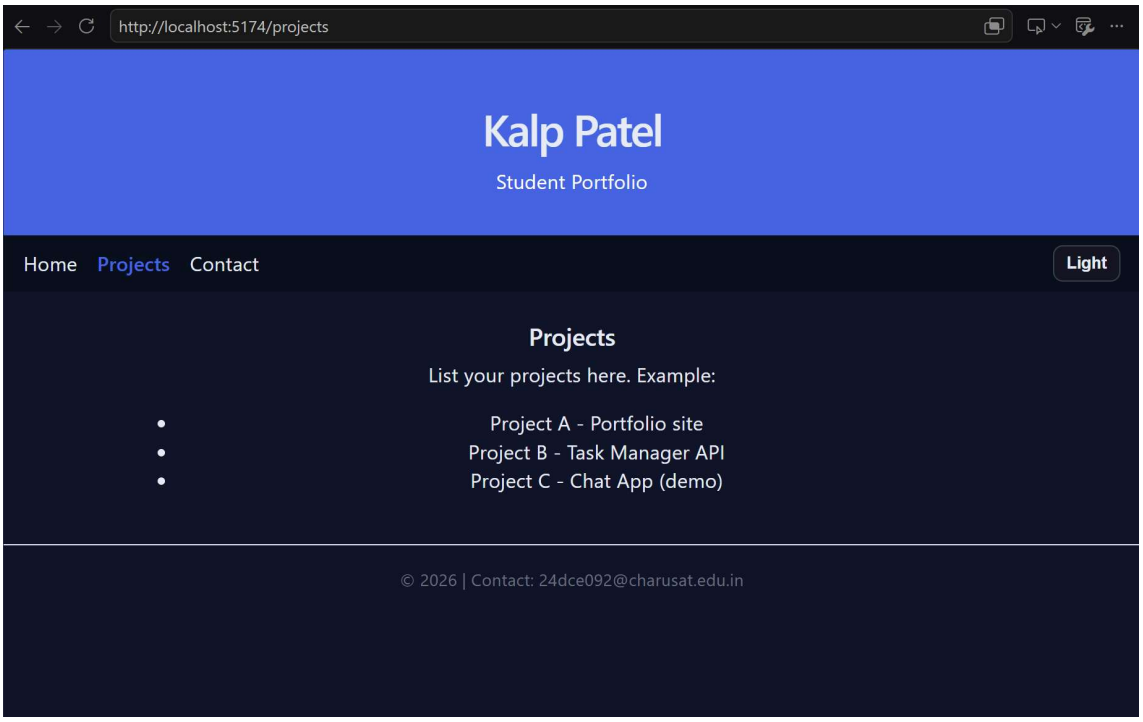

```jsx
export default function NotFound() {
  return (
    <section>
      <h2>404 — Page not found</h2>
      <p>The page you're looking for doesn't exist.</p>
    </section>
  );
}
```
