

PRACTICAL 1

Aim :

Create a React application using Vite for a student portfolio page. The application must include at least 4 reusable components: Header, About, Skills, and Footer. Each component must be independently structured and composed into a single-page layout. No logic or JSX should be duplicated across components. Props must be used to pass at least one piece of data into a minimum of 2 components.

Code :

frontend/src/components/Header.jsx :-

```
function Header({ name, themeColor }) {
  return (
    <header style={{ backgroundColor: themeColor }}
      className="header">
      <h1>{name}</h1>
      <p>Student Portfolio</p>
    </header>
  );
}
export default Header;
```

frontend/src/components/About.jsx :-

```
function About() {
  return (
    <section className="about">
      <h2>About Me</h2>
      <p>
        I'm a 5th-semester IT student learning full-stack web
        development with React, Node.js, and MongoDB as part of
        ITUE301.
      </p>
    </section>
  );
}
export default About;
```

frontend/src/components/Skills.jsx :-

```
function Skills({ skillList }) {
```

```
return (  
<section className="skills">  
<h2>Skills</h2>  
<ul>  
  {skillList.map((skill) => (  
    <li key={skill}>{skill}</li>  
  ))}  
</ul>  
</section>  
);  
}  
export default Skills;
```

frontend/src/components/Footer.js :-

```
function Footer() {  
  return (  
    <footer className="footer">  
      <p>&copy; {new Date().getFullYear()} | Contact: 24dce092@charusat.edu.in</p>  
    </footer>  
  )  
};  
export default Footer;
```

frontend/src/App.jsx :-

```
import Header from './components/Header';  
import About from './components/About';  
import Skills from './components/Skills';  
import Footer from './components/Footer';  
import './App.css';  
function App() {
```

```
const skillList = ['React', 'Node.js', 'Express', 'MongoDB', 'JavaScript'];  
return (  
  <  
  <Header name="Kalp Patel" themeColor="#2563eb" />  
  <main>  
    <About  
    <Skills skillList={skillList} />  
  </main>  
  <Footer  
  </>  
);  
}  
export default App;
```

Output :
